

Manufacturing for extreme conditions

Customized Deck Machinery & Offshore Solutions

Marine Industry & Offshore Wind Energy

Manufacturing in compliance with all major standards

Maritime Hydraulic and its sister company MHD Offshore provide a wide range of solutions for safety operations in the Offshore industry. We created Sea Spring® as a core technology for motion compensation system, used in:

1. Crane Shock Absobers
2. Load Management Systems
3. Heave Compensated Winches
4. Heave Compensated Gangways

Operating in adverse weather conditions can be very challenging and has serious commercial impact on projects. Our technical solutions increase operational safety and reduce weather dependency and downtime caused by adverse weather conditions.

Weather dependency is a fact that cannot be ignored in marine operations. Large investments, expensive equipment and costly operations are common features of all offshore activities.

Less weather downtime will result in much lower installation cost, better and more accurate planning along with improved logistics within operations. Reduce risk will further increase safety and will provide opportunity for better risk assessment.
